BULK FUEL DELIVERIES

We have a network of wholesale depots and a large fleet of delivery vehicles to meet all of your bulk fuel needs. Our delivery fleet is operated and maintained by experienced drivers and depot staff.

Whether you would like to have a set scheduled order in or call as you need, we provide fuel deliveries to customers throughout regional Australia. In the event you have a current account with us, our depot staff can charge fuel deliveries direct to your account. Our wholesale depots can be contacted weekdays between 7.30am and 5.00pm on 1800 842 842.

PRODUCTS

Please note: product availability and delivery may vary based on location.

- Reduce Bank Fees Provides convenience

AUTOPAY DIRECT DEBIT – CREDIT CARD

- Due 12 days from month of purchase
- Credit Card Merchant Fees apply

CASH ON DELIVERY

- Cash or cheque can be given to driver upon delivery

ADBLUE

Our wholesale depots also now stock AdBlue in 20L & 1000L shuttles.

AdBlue is a natural ingredient in our environment. It is used in the exhaust systems of Euro4, Euro5 and Euro6 trucks to reduce harmful emissions. It is injected into the exhaust gases as a post combustion process, before they pass through the SCR (Selective Catalytic Reduction) converter. AdBlue turns the nitrogen oxide into a harmless nitrogen gas and water vapour.

Most vehicles are typically fitted with a 70 or 150 litre tank and will need to be topped-up with AdBlue every two to three tanks of fuel. It is recommended that the vehicle carry a reserve supply of AdBlue to ensure the vehicle fitted with a SCR system will perform at its maximum efficiency. AdBlue is non-toxic and poses no risk, if properly handled, to the environment, animals or humans.

AdBlue meets ISO 22241-1.

VOLVO OWNERS

Please refer to SCR Emission Control 5, page 3:147 of your current Owner Manual stating that other brands can be used as long as the products conform to ISO standard 22241-1. AdBlue conforms to this standard.

DIRECTIONS

Fill the Diesel Engine Fluid tank with AdBlue. It will be metered into the engine exhaust system by a dosing module. This averages to 3-6% of diesel fuel consumption.
